

Annex B

HealthX

HealthX was established in January 2023 to accelerate the next generation of health innovation. HealthX aims to foster multi-channels of collaboration amongst Government ministries and agencies, industry technology partners, healthcare providers, and other stakeholders, in the HealthTech space. HealthX will facilitate the rapid development and deployment of technology solutions to address pertinent healthcare challenges of the day, which will fuel the force of transformation for tomorrow's health. HealthX will reduce common barriers to innovation, whilst maintaining important tenets of the health system where patient safety and cybersecurity are paramount.

Key HealthX enablers include:

- **HealthTech Advisory Centre**, a one-stop centre for interested healthcare and technology partners to navigate the innovation pathways for design, development, trials, pilots, deployment and scaling of their solutions in the healthcare ecosystem.
- **HealthX Call-for-Innovation**, an open innovation platform for experimentation of ideas and solutions in an agile and iterative basis. The platform features challenge statements by business owners with opportunities for co-development of impactful solutions with the technology industry that can revolutionise healthcare.
- **HealthX Network** of industry partners with innovative technology solutions with potential applications in healthcare.
- **HealthX Co-Innovation Labs** where industry partners can provide expertise and work with Synapxe and the public healthcare sector to co-create prototypes, conduct pilots and scale solutions.
- **HealthX Innovation Sandbox** for fast experimentation and assessment in a secure, self-contained, simulated environment on the Healthcare Commercial Cloud (HCC).
- **Outcome-Based Spiral Contracting Framework** to enhance speed-to-market for successful innovations to scale faster, facilitating expedient deployment while balancing governance and transparency. This framework starts from "Call-for-Innovation" to invite industry partners to submit proposals through an open and fair competition on HealthX

platform, where shortlisted partner(s) will begin the innovation cycle with prototyping. With the Outcome-Based Spiral Contracting Framework, an industry partner can be awarded with spiral contracts through to the operationalisation stage with successful outcomes met at each stage.

- **Cybersecurity Self-Attestation Portal** for innovators to learn and self-attest their products against the public healthcare infrastructure and cybersecurity requirements via AI tools and chatbots.
