

[For Information]
CMS-Laboratory
Integration Status

Declared by CMS Providers as of 28 May 2026

Introduction to HSG-compliant CMS Laboratory Integration Status

Laboratory integration with the Clinic Management System (CMS) is a useful feature which reduces the need to manually transcribe the results when there is full lab integration. Clinics are encouraged to explore adoption of CMSEs that are integrated with the labs.

The table below shows the extent of lab integration of the Healthier SG (HSG)-compliant CMSEs based on June 2026 HSG Certification requirements. The level of integration with Laboratories is not in prevailing HSG-compliant CMS criteria. For more information, you may approach the respective CMS Providers as there may be different packages and prices to enable integration.

CMS-Laboratory integration status will be reported in the following matrix:

Status	Description
✓	Results from lab are transmitted to the CMS
—	No integration
